First Airbus A318 with PW6000 engines and Aircelle nacelles is delivered to LAN Airlines

June 5, 2007

The first Airbus A318 powered by the new Pratt & Whitney PW6000 engines – which are equipped with Aircelle's nacelles – has been delivered to LAN Airlines of South America.

Following its formal handover at Airbus' Hamburg, Germany, the aircraft departed for Chile, where it will complement the airline's A319 and A320 operations on its domestic route network.

LAN Airlines has ordered 20 A318s with the PW6000. This new engine gives customers a choice of an alternate powerplant on the A318, which already is in service with CFM International's CFM56.

Pratt & Whitney-powered versions of the A318 were certificated by the U.S. Federal Aviation Administration (FAA) in May and by the European Aviation Safety Agency (EASA) in December 2005.
